Murrayville-Woodson Water Commission Customers,

In an effort to remove lead from drinking water systems nationwide, the United States Environmental Protection Agency (USEPA) in conjunction with the Illinois Environmental Protection Agency (IEPA) and the Illinois Department of Public Health (IDPH) are requiring all Public Water Supplies to identify all service material within their system.

The Murrayville Woodson Water Commission is aware of the service material types that they have installed, but we do need your assistance identifying the service line material on you side of the water meter.

IT IS MANDATORY THAT WE HAVE THIS FILLED OUT AND RETURNED!

Please mark the appropriate areas below (all that apply) and return to our office PO Box 139 Murrayville, IL 62668 no later than January 31st, 2023.

The water service material used from the water meter to my home consists of:

Plastic (including PVC,PEX,ABS, Poly Butylene, Etc)

Galvanized Iron Pipe

Lead Pipe

Copper (if Copper, was solder used and if so, what type of solder) no lead solder
 lead solder

If you would like assistance identifying your service material, please call our water operator Terry Dunmire 217-370-2195.

As the Owner of the property located _____(911 address), I certify that the information provided is accurate.
